In computing the said period of three clear days, Sundays and Customs holidays shall not be taken into account, but in ascertaining the period for which any goods are liable to double rent, account shall be taken of Sundays and Customs holidays, and a fractional part of a period of twenty-four hours shall count as a full period of twenty-four hours.

(ii.) All goods which are within five days from the date of landing (of which days the day of landing and the day of re-shipment shall each count as one) either (*a*) lodged within the re-shipment warehouse provided by the Government or (*b*) re-shipped shall be free of warehouse rent. If not so re-shipped or lodged within the re-shipment warehouse within five days after landing, rent, from the date of landing, will be charged as on import cargo until date of such re-shipment or removal. Provided that all goods lodged in the re-shipment warehouse shall be liable to a single rate for every period of five days or portion of five days from the date of landing (including day of removal, Sundays, and Customs holidays). Provided, further, that if such goods be not re-shipped within a period of six weeks from the date of landing, rent will be charged as on import cargo from the expiration of six weeks from the date of landing until the date of re-shipment.

(iii.) The liability to single and double warehouse rent extends to all coastwise goods, whether of foreign origin or of local production and manufacture.

(iii.) (*a*) Provided that rent shall not be recovered for goods carried only on a coastwise permit between out-bays at which no customs-house is stationed and the ports to which the out-bays belong, nor for duty-paid goods shipped on boat notes from Kayts to Jaffna. The islands adjoining and forming part of the Northern Province are for this purpose out-bays of the ports of Jaffna and Kayts.

METEOROLOGY.

General Remarks.—There is a marked variation in climate between the different parts of Ceylon. In the low-country, with a mean temperature of the order of 80° F., a noticeable feature is the small range of both temperature and pressure ; there is, however, wide divergence between the moist conditions in the south-west of the Island, where the average annual rainfall varies from 100 to 200 inches, and the dry zone areas of the north, north-west, and south-east.

2. Inland, with altitudes reaching 8,000 feet, the temperature is cooler, and shows a bigger range ; there is a corresponding change in vegetation, and the conditions are altogether more akin to those in the temperate zone.

3. *Rainfall.*—The highest annual rainfall registered was at " Carney Estate," Ratnapura, which had a total of 199·36 inches, and 233 days on which rain fell. The lowest annual rainfall was at Naula tank, which had a total of 14·72 inches in 57 days. The stations with the highest and lowest average annual rainfall are, respectively, Padupola, with 218·29 inches in 200 days, and Marichchukkadi, with 33·03 inches in 57 days. The longest drought occurred at Paranthan railway station, lasting for 187 days, May 13 to November 15. The longest wet period occurred at Koslanda, lasting for 40 days, October 8 to November 16.

The annual rainfall at Colombo (Cinnamon Gardens) was 58·48 inches in 168 days. At Kandy 80·17 inches were registered in 181 days, while the annual rainfall at Nuwara Eliya was 81·13 inches in 204 days. For the Island generally the rainfall was heaviest to the south-west and on the north-eastern slopes of the hills ; and least to the north-west and south-east. Though heaviest in the south-west, it was also in this district much below the average. The greater part of the coast district and most of the Up-country were also in deficit. Immediately to the south-east of the hills and in the inland district to the north of the hills the rainfall was above the average.

4. *Temperature.*—The station showing the highest mean shade temperature for the year was Trincomalee, with 83·0° F., and the lowest Nuwara Eliya, with 59·2° F. The figures for Colombo and Kandy were 80·5° F. and 76·0° F., respectively.

The highest shade temperature recorded during the year was 101·2° F. at Trincomalee on July 19. The highest on record is 103·7° F. at Trincomalee on May 12, 1890.

The highest shade temperature at Colombo in 1918 was 92·6° F. on April 9.

The mean daily range, *i.e.*, the difference between the mean of the maximum and the mean of the minimum, was highest at Badulla (19·3° F.), and lowest at Galle (8·2° F.) ; at Colombo and Kandy it was 11·9° F. and 16·2° F., respectively. The absolute range for the year, *i.e.*, the difference between the highest and the lowest readings actually recorded, was greatest at Nuwara Eliya (49·7° F.), and lowest at Galle (22·0° F.).

5. The meteorological tables published this year are on the same lines as those of last year.

Table I. gives the height above mean sea level of the principal meteorological stations in the Island, the yearly mean of the average and the 1917 figures for temperature, air pressure (corrected for temperature only), and the clouded state of the sky.

Table II., percentage humidity for 1917 (as calculated from the humidity tables in " Tables for the Reduction of Meteorological Observations in India ").

Table III. gives the monthly mean of the direction and the daily velocity of the wind for the coast stations.

Table IV., the high velocities of wind recorded during the year by the Beckley self-recording instrument at Colombo (Fort) and the direction of the gusts at the time.

Table V. gives the chief rainfall intensities, as recorded by the self-recording instrument at the Observatory.

Table VI. gives the rainfall details as recorded at the various stations. The averages for stations with records extending over ten years is not given. The stations whose average figures are not given, and at which the greatest amount of rain registered in the 24 hours during the year constitute a record, are Mahauswewa, Orange Hill, and Topawewa.

Table VII. gives the periods of drought and wet at all stations, a day being reckoned as wet if 0·01 inch is recorded.

RETURN OF PRISONS AND PRISONERS.

Replies to the Questions, compiled from the Returns of the respective Superintendents.

QUESTION I.

If the prison is on the separate system, is the separation complete? And if not, what is the separation enforced by day and night, respectively?

All the penal stage prisoners of the Island, if sentenced to over a month, are passed through one of the following jails:—Welikada, Kandy, Jaffna, Anuradhapura, Galle, and Batticaloa.

In these jails the penal stage prisoners are worked on the separate system. They are confined in separate cells, and are worked in stalls. They are marched from their cells to the stalls in single file three paces apart, and are not allowed to speak or communicate with each other at all. Prisoners not in penal stage are not worked on the separate system.

If not on the separate system, what provision is there for the supervision of the prisoners while in association ?

The males are supervised by male officers of various grades, and the females by matrons, in all jails.

QUESTIONS III. AND IV.

How many cells are there ; and how many associated wards ? Taking the *average* number of prisoners in jail, how many cubic feet of space are there for each prisoner during the hours of sleep ?

HARBOURS.

QUESTIONS.

1. At bar or entrance, what is—
   (1) The minimum width ?
   (2) The minimum navigable depth, low water ordinary spring tide ?

(*Note.*—If between the entrance and the deep sea there are bars or shoals where a lesser depth occurs than the minimum indicated above, a list of such obstructions and of the depths over them (low water ordinary spring tide) should be given.)

2. In the approach channel from bar or entrance to berthing accommodation, what is—
   (1) The minimum and maximum width ?
   (2) The minimum and maximum depth, low water ordinary spring tide ?

3. What is—
   (1) The rise and fall of tides—
      (*a*) Ordinary springs ?
      (*b*) Ordinary neaps ?
   (2) The rise of ordinary neaps above low water ordinary spring tide ?

4. What is the maximum available depth of water—
   (*a*) At piers or wharves low water ordinary spring tide ?
   (*b*) In the case of enclosed docks in the entrance locks, if any, and at dock quays, high water ordinary neap tide ?

5. What are the respective lengths of piers, wharves, or (in the case of enclosed docks) dock quays, where the maximum depth of water, referred to in Question 4, exists ?
What percentage does the total of these lengths bear to the total accommodation at the port ?

6. What are the dimensions (length, loaded draught, and beam at that draught) of the largest vessels which, under existing circumstances, can be—
   (*a*) Berthed alongside any pier or wharf (low water ordinary spring tide) ?
   (*b*) In the case of enclosed docks—
      (1) Admitted direct to ?; or
      (2) Admitted through the entrance lock of any important dock or docks, high water ordinary neap tide ?

7. What are the dimensions (length, breadth, and depth over sill high water ordinary neap tide) of the largest dry dock or floating dock in the port ?

8. Are operations in progress to increase the depth of water—
   (*a*) At the entrance and in the approach channel ?
   (*b*) In the case of enclosed docks at the entrance lock, if any, of any important dock or docks ?
   (*c*) At the principal berths to 40 feet at low water ordinary spring tide (in the case of the berths at enclosed docks, high water ordinary neap tide), and is accommodation being provided for vessels 1,000 feet in length and of 100 feet beam ?

If not, to what extent is deepening being effected, and for vessels of what dimensions (length, draught, and beam at that draught) is accommodation being provided or in contemplation ?

ANSWERS.

3. (1) (*a*) Ordinary springs .. .. .. Ft. 2
(*b*) Ordinary neaps .. .. .. In. 8
(2) Rise of ordinary neaps above low water ordinary spring tide, about .. .. In. 12

4. No enclosed docks. All vessels lie out under the shelter of the breakwaters, and are loaded or discharged from lighters. Practically all of the western half of the harbour within the limits of dredging has a minimum depth of 31 feet below low water ordinary spring tide, but the greater portion of this is 33 feet deep. The eastern half has a minimum depth of 27 feet, but a considerable portion is 30 feet in depth or more. The deepening of the harbour to 33 feet below low water ordinary spring tide over certain areas which are at present above that level is now in progress.

The proposal to dredge 250 acres of the north-western portion of the harbour to 36 feet, at a cost of £190,000, has been sanctioned, and a commencement will be made with this work when the dredger, which is now on order, is received.

5. See answer to Question 4.
